Reproducing Women-Yi-Wu Wu 2010-08-11 This innovative book uses the lens of historical culture to examine the development of medicine in Qing dynasty China. Focusing on the specially of “medicine for women” (Yi-Wu), Yi-Wu Wu explores the material and ideological issues associated with women’s reproduction and sexuality in the late imperial period. She draws on a rich array of medical writings that circulated in seventeenth- to nineteenth-century China to analyze the development of reproductive advice and the ways in which reproductive health problems were understood.

Cosmetic Surgery Narratives Debra Gliniak 2014-12-23 This book examines British and American women's narratives of cosmetic surgery collected between 1995 and 2007, with particular attention to what those narratives say about contemporary issues of social and cultural change. The book challenges conventional assumptions about cosmetic surgery by aligning them with nationally-specific notions of "appropriate" medical treatment. Consumers' narratives are also analysed by "global" processes that portray cosmetic surgery as a lifestyle choice and a tool for building one's own in the competitive marketplace of employment or heterosexual romance. Such meanings are in turn represented by women's own authored account, at the same time that accounts are limited by cultural and scholarly assumptions surrounding the subject.

Anthropology and International Health-Mark and Minn Nitcher 2003-09-01 Recognizing the significance of cultural aspects in the practice of medicine, this book places a strong emphasis on the social structure, customs, and history of the indigenous population and its ramifications on health care providers. The book also considers the eco-cultural influences on the way medicine is practiced. By including chapters that focus on health care's sudden advent as commodity and the macroeconomic approach to public funding for health care facilities, the Nitchers explore a world in which money and patient expectations play an ever increasing role in the way health care is provided.

Medical Women and Victorian Fiction-Kristine Swenson 2005 In Medical Women and Victorian Fiction, Kristine Swenson explores the cultural intersections of fiction, feminism, and medicine during the second half of the nineteenth century in Britain and her colonies by looking at the complex and reciprocal relationship between women and medicine in Victorian culture. Her examination centers around two distinct though related figures: the Nightingale nurse and the New Woman doctor. The medical women in the fiction of Elizabeth Gaskell (Ruth), Wilkie Collins (The Woman in White), Dr. Margaret Todd (Mona McLean, Medical Student), Hilda Griggs (Peace with Honour), and others are analyzed in relation to nonfictional discussions of nurses and women doctors in medical publications, nursing tracts, feminist histories, and newspapers. Victorian anxieties over sexuality, disease, and moral corruption came together most perceptibly around the figure of a prostitute. However, Swenson takes as her focus for this volume an opposing figure, the medical woman, whose Victorians deployed to combat these social ills. As symbols of traditional female morality informed and transformed by the new social and medical sciences, representations of medical women influenced public debate surrounding women's education and employment, the Contagious Diseases Acts, and the health of the empire. At the same time, the presence of these characters is both undermined and developed to reinforce broader cultural attitudes toward domestic women or servants, inevitably altered the meaning of womanhood and the positions of other women in Victorian culture. Swenson challenges more conventional histories of the rise of the actual nurse and the woman doctor by treating as equally important the development of cultural representations of these figures.

Anthropology of Pregnancy Loss-Rosanne Cecil 2020-08-26 How much influence does culture have on a mother's reactions to pregnancy loss? At what stage is a fetus attributed with human status? How does this affect the mother's reactions to the loss of a baby? Contemporary, historical and oral-history accounts from regions as diverse as rural North India, urban America, South Africa and Northern Ireland, provide a fascinating insight into the experience and management of miscarriage across a number of different cultures. The authors explore how the social, technological and medical context in which miscarriages occur can affect the ways in which women experience such an event. In the West, advances in medical technology, a low infant-mortality rate and a low birth rate have raised expectations as to the successful outcome of each pregnancy. In addition, the early confirmation of pregnancy makes consequent pregnancy loss—which might have gone unnoticed or unconfirmed in the past—all the more difficult for mothers in the West. Yet, mourning rituals and behaviour at a pregnancy loss, which may be elaborated in some societies, are generally considered to be inappropriate in many Western societies. Differing social beliefs regarding the causes of miscarriage, preventative measures and curative treatments are also examined. Medical anthropologists, sociologists and health professionals will all find this book fascinating reading.

Routledge International Encyclopedia of Women-William C. Cockerham 2016-10-06 Routledge International Encyclopedia of Public Health, Second Edition is an authoritative and comprehensive guide to the major issues, challenges, methods, and approaches of global public health. Taking a multidisciplinary approach, this new edition combines complementary scientific fields of inquiry, linking biomedical research with the social and life sciences to address the three major themes of public health research, disease, health processes, and disciplines. This book helps readers solve real-world problems in global and local health through a multidisciplinary and comprehensive approach. Covering all dimensions of the field, from the details of specific diseases, to the organization of social insurance agencies, the articles included cover the fundamental research areas of health promotion, economics, and epidemiology, as well as specific diseases, such as cancer, cardiovascular diseases, diabetes, and reproductive health. Additional articles on the history of public health, global issues, research priorities, and health and human rights make this an indispensable resource for students, health researchers, and practitioners alike. Provides the most comprehensive, high-level, internationally focused reference work available on public health. Presents a unique research resource for both researchers familiar with the field and non-experts requiring easy-to-find, relevant, global information and a greater understanding of the wider issues Contains interdisciplinary coverage across all aspects of public health incorporates biomedical and health social science issues and perspectives Includes an international focus with contributions from global domain experts, providing a complete picture of public health issues

Women In Human Evolution-Lori Hager 2005-08-18 This volume, the first of its kind, examines the role of women paleontologists and archaeologists in a field traditionally dominated by men. Women researchers in this field, have questioned many of the assumptions and developmental scenarios advanced by male scientists. As a result of such efforts, women have made a far more central role in models of human development and have radically altered the way in which human evolution is perceived. This history of the feministic critique of science, is of profound significance and will be of interest to all those who work in the fields of anthropology, archaeology, paleontology, and human biology.

The Long Sexual Revolution-Hera Cook 2004-02-05 In this book Hera Cook traces the path of sexuality in England, and shows how its route was determined by the gradual erosion of control over fertility. Most sexual activity had major economic and social costs, the most fundamental of which was the physical cost of children upon women's bodies. Around 1800 birth rates reached historical heights. Using a combination of demographic and qualitative sources, Dr Cook examines the connection between the struggle to lower fertility and the increasing expression of sexuality throughout the nineteenth century. Contraception became a viable option in the early twentieth century. The book charts the resulting slow relaxation of attitudes to sexuality and the remaining of heterossexual physical behaviour, culminating in the sexual revolution of the 1960s.

Women's Medicine-Lucie F. Newman 1985-09-14 In 1997, the Institute of Social and Cultural Anthropology at the University of Oxford held a workshop on the social dynamics of human reproduction. This volume contains 12 papers from scholars in Britain and the U.S. that were originally presented at that workshop. Topics include, for example, motherhood among young prostitutes in Thailand, the meaning of children in Hong Kong, and the reproductive health of refugees. Issues in Reproductive Technology-Helen B. Holmes 1994-08-01 This book offers detailed ethnographic studies from Africa and the Caribbean to explain AIDS in a global and comparative third-world context. The essays move beyond medical or epidemiological models, explaining the epidemic in its economic, social, political, and historical contexts.

One Blood-Elisa Janine Soh 1993-07-01 One Blood offers a wealth of ethnographic material, skillfully using traditional Japanese images and expressions to present a coherent and systematic depiction of the Japanese body, and explains some of the complex issues of medical anthropology in a clear and accessible fashion and shows how gender and kinship tensions are expressed through culturally constructed syndromes. The book explores the ways in which the body serves as a medium for the expression of ideas about the social and moral order. Childbirth socializations and issues about gender relations, kinship, social obligations, sorcery, and deceit are investigated in association with beliefs about nutrition, procreation, sexuality, cleanliness, bodily flow, and sickness.
