**Organic Produce Supply Chains in India (CMA Publication No. 222)-** Sukhpal Sigh 2009-06-28 This book examines the production, procurement and marketing aspects of the organic produce sector with the focus on marketing agencies and producers in each commudity/product chain. It analyses the various institutional arrangements like contract farming, networking and producer level co-ordination prevalent in this sector. Based on case studies of various type of organic players in India, both in export market as well as in domestic market.

**Research Developments in Saline Agriculture-**Jagdish Chander Dagar 2019-06-21 Soil and water salinity is a major challenge for the agricultural community and policy makers in terms of meeting the burgeoning population's demand for food and other agricultural commodities. In coastal regions, climate change and sea level rise will aggravate the problem with more and more areas becoming saline due to intrusion of sea water. As such there is a pressing need for modern tools and innovative techniques for the

identification of salty soils and poor-quality waters, crop production, soil reclamation and lowering the water table in waterlogged areas. Tackling next-generation problems such as contamination of soil and underground water due to fluoride and arsenic, as well as developing multi-stress tolerant crops is also a high priority. Further, techniques for domesticating halophytes, mangrove-based aquacultures, using seaweed cultures as agricultural crops and integrated farming systems need to be perfected. This book addresses all these aspects in detail, highlighting the diverse solutions to tackle the complex problem of salinity and waterlogging and safer management of poor-quality waters. With chapters written by leading experts, it is a valuable resource for researchers planning future investigations, policy makers, farmers and other stakeholders, and for students wanting insights into vital issues of environment.

**Methane Emissions from Major Rice Ecosystems in Asia**-Reiner Wassmann 2012-12-06 Rice production is affected by changing climate conditions and has the dual role of contributing to global warming through emissions of the greenhouse gas methane. Climate change has been recognized as a major threat to the global environment. Because of insufficient field data, rice-growing countries face a problem when trying to comply with the United Nations Framework Convention on Climate Change stipulations to compile a national inventory of emissions and to explore mitigation options. Given the expected doubling in rice production in Asia,

the need to evaluate the interaction between climate change and rice production is critical to forming a sound basis for future directions of technology developments by policy makers, agriculturists, environmentalists, rice producers, and rice consumers. The present book comprises two sections. The first part documents a comprehensive overview of the results achieved from an interregional research effort to quantify methane emission from major rice ecosystems and to identify efficient mitigation options. This research report broadens understanding of the contribution of rice cultivation to methane emissions and clarifies that emissions are relatively low, except in specific rice ecosystems, and that these high emissions could be ameliorated without sacrificing yield. The second section shows results from other projects that investigated the role of rice cultivators in field and laboratory approaches. The findings represent inputs for future modeling approaches in the role of rice cultivators. The expanded database generated by other projects is reflected in modeling efforts.

**Analysis of Reflector Antennas**-W. V. T. Rusch 2013-10-22 Analysis of Reflector Antennas provides information pertinent to the analysis of reflector-antenna systems. This book provides an understanding of how design data have been and can be derived. Organized into four chapters, this book begins with an overview of the history of focusing reflector-antenna systems characterized by a highly variable level of general interest. This text then examines the solutions of the scalar Helmholtz equation in rectangular and spherical coordinates. Other chapters consider antenna performance described in terms of several fundamental properties, including capture area, directivity, gain, beam efficiency, aperture efficiency, polarization, effective noise temperature, and phase center. This book discusses as well the resulting functional dependence between axial ratio and component amplitude, which is the same as that between voltage standing wave ratio and voltage reflection coefficient. The final chapter deals with the role of the special-purpose digital computers. This book is a valuable resource for research and development engineers.

All bulb vegetables are known for their characteristic pungent flavor due to the presence of a group of sulfur compounds in them. Growing practices, food uses and nutritional information of these bulb vegetables are explained in detail in this book.

**Guava**-Sisir Mitra 2021-05-27 Guava (*Psidium guajava* L.) is an exquisite, nutritionally and economically valuable crop of tropical and subtropical regions of the world. It outshines other tropical fruits in productivity, hardiness, adaptability, nutritional value, and ensures higher economic returns to growers. Guava is commercially grown in over 70 countries, and is gaining in popularity as a 'super fruit' due to its nutritional and health benefits. With contributions from international experts, this is a valuable resource for researchers and students in horticulture, and guava-industry support personnel.

**Crop production manual**-Food and Agriculture Organization of the United Nations 2020-01-28 The states of Pohnpei and Yap in the Federated States of Micronesia currently produce limited amount of food locally. Exporting food is also limited therefore importing substantial quantities of vegetables, fruits and root crops amounts to millions of dollars annually. This is partly owing to a lack of necessary information on crop production locally to assist producers in their production. To help contribute to rectifying this situation, this manual is aimed to provide guidelines for farmers and producers on seedling production and management, plant spacing, cropping program, soil fertility and crop protection.

**Training Manual for Organic Agriculture**-I. Gomez 2017-09-01 The production of this manual is a joint activity between the Climate, Energy and Tenure Division (NRC) and the Technologies and practices for smallholder farmers (TECA) Team from the Research and Extension Division (DDNR) of FAO Headquarters in Rome, Italy. The realization of this manual has been possible thanks to the hard review, compilation and edition work of Nadia Scialabba, Natural Resources officer (NRC) and Ilka Gomez and Lisa Thivant, members of the TECA Team. Special thanks are due to the International Federation of Organic Agriculture Movements (IFOAM), the Research Institute of Organic Agriculture (FiBL) and the International Institute for Rural Reconstruction (IIRR) for their valuable documents and publications on organic farming for smallholder farmers.

**Indian Spices**-Amit Baran Sharangi 2018-03-21 This work comprehensively covers the production, processing and post harvest technology of Indian spices with an added focus on the history and uniqueness of this legendary regional product. Individual chapters describe the unique aspects of these spices and their production, post harvest technology and value addition, molecular breeding, organic farming aspects, climate change effects and bioactive compounds. Seasonal, preparatory, and storage conditions resulting in composition variations are explored. Indian Spices: The Legacy, Production and Processing of India's Treasured Export begins by outlining the historical legacy of Indian spices and describing the many aspects that make this product so unique and highly valued. The abundance and variety of these spices are also delineated. Further chapters focus on current research involving the production technology involved in production, management, harvesting and processing of Indian spices along with post harvest processes, storage and transportation. Important and effective trends such as molecular breeding for spice crop improvement, tissue culture, climate change impacts, organic spices, extension strategies and secondary metabolites receive dedicated chapters. A valuable aspect of this work is the presentation of value chains for these spices, with extensive research presented on the marketing and export of the product. With the shift from localized distribution networks to a fully globalized industry, this book comes at an important time of growth for Indian spices and will be of major value to any researcher with interest in the past, present and future of this product.

**MUSHROOMS**-SUBRATA BISWAS 2011-12-17 Mushroom is an important crop of fungal origin that can be cultivated on several agricultural residues.

There are about twenty mushroom species grown commercially all over the world, specifically known for their attractive flavours and textures that make food delicious. Mushrooms not only contain protein, vitamins and minerals, but also have low calorie content with little fat and sugar. They provide a high amount of qualitative nutrition required for our growth and strong immune system. This is a complete manual on the cultivated edible mushrooms covering all the information from their morphological features to post-harvest preparations. The structure, natural diversity, food and medicinal values, impact of climatic factors on their cultivation and cultivation methodologies are all explained in an easy-to-understand way. The economics of mushroom cultivation and ancillary information about mushroom centres, sources of spawn and machineries as well as addresses of leading mushroom farms and exporters have been elaborated in the text. The text is intended for the undergraduate students of Agriculture, Biotechnology, Botany and Microbiology. Besides, it will serve as a handy compendium for those engaged in mushroom development programmes as well as those interested in establishing their own mushroom farms.

**Handbook of Herbs and Spices**-K. V. Peter 2012-09-21 Herbs and spices are among the most versatile ingredients in food processing, and alongside their sustained popularity as flavourants and colourants they are increasingly being used for their natural preservative and potential health-promoting properties. An authoritative new edition in two volumes, Handbook of herbs and spices provides a comprehensive guide to the properties, production and application of a wide variety of commercially-significant herbs and spices. Volume 2 begins with a discussion of such

issues as the medicinal uses of herbs and spices and their sustainable production. Herbs and spices as natural antimicrobials in foods and the effect of their natural antioxidants on the shelf life of food are explored, before the book goes on to look in depth at individual herbs and spices, ranging from ajowan to tamarind. Each chapter provides detailed coverage of a single herb or spice, and begins by considering origins, chemical composition and classification. The cultivation, production and processing of the specific herb or spice is then discussed in detail, followed by analysis of the main uses, functional properties and toxicity. With its distinguished editor and international team of expert contributors, the two volumes of the new edition of Handbook of herbs and spices are an essential reference for manufacturers using herbs and spices in their products. They also provide valuable information for nutritionists and academic researchers.
