"This is a valuable resource for readers seeking basic to advanced information on measurement. It should be on the bookshelf of all researchers, and a requirement for graduate nursing students."Score: 100, 5 stars--Doody's Medical Reviews "...this book is a wonderful shelf reference for nurse researcher mentors and investigators who may need to explore content or use content to design, test, select, and evaluate instruments and methods used in measuring nurse concepts and outcomes."--Clinical Nurse Specialist This fourth edition presents everything nurses and health researchers need to know about designing, testing, selecting, and evaluating instruments and methods for measuring in nursing. Thoroughly updated, this fourth edition now contains only the latest, most cutting-edge measurement instruments that have direct applicability for nurses and health researchers in a variety of roles, including students, clinicians, educators, researchers, administrators, and consultants. Using clear and accessible language, the authors explain in detail, and illustrate by example, how to conduct sound measurement practices that have been adequately tested for reliability and validity. This edition is enriched with topics on the leading edge of nursing and health care research, such as measurement in the digital world, biomedical instrumentation, new clinical data collection methods, and methods for measuring quality of care. Key features: Provides new and emerging strategies for testing the validity of specific measures Discusses computer-based testing: the use of Internet research and data collection Investigates methods for measuring physiological variables using biomedical instrumentation Includes information on measurement practices in clinical research, focusing on clinical data collection methods, such as clinimetrics Identifies the challenges of measuring quality of care and how to address them
Nursing Research Online consists of 14 ready-to-use, interactive modules corresponding to each chapter in the text, along with a collection of additional learning activities that faculty can use to supplement the core modules. Ready-to-use modules feature a rich variety of engaging examples - from the nursing literature, nursing practice, and everyday life - to help students grasp key concepts. Concise lessons help students process information in manageable blocks. Modules each include integrated Learning Activities, Narrated Algorithms, and a built-in Audio Glossary, to help students master nursing research. Unique Closer Look boxes expand on module content for more motivated students and bring additional insights that help all students understand difficult concepts. Reading Assignments with Focus Questions help students relate the course material to the textbook content, and focus their reading accordingly. Module Summary features conclude each module and ensure content mastery. Supplemental Resources allow the instructor to expand on and customize the course to meet the needs of their particular program: 42 Discussion Questions - three for each chapter in the textbook - allow faculty to simulate classroom discussion in an online environment. 5 Critiquing Activities challenge students to apply their critiquing skills to both qualitative and quantitative research articles. A Research Article Library supplements the integrated research examples and allows faculty to create customized critiquing assignments. Narrated Algorithms from the modules are available as freestanding assets to help illustrate the various types of research designs in a friendly and engaging manner. WebLinks, Image Collection, and Test Bank from the Burns & Grove Evolve website are all incorporated into the course to complement the course resources and allow the instructor maximum flexibility.
