An International
Handbook of Tourism

Education David Airey

An International
Handbook of Tourism

2006-08-11 As tourism matures as an academic
subject and the number of tourism higher education providers continues to expand world-wide, there is an increasing interest in its educational aspects. At the same time the development of research into education issues related to tourism means that there is now a developing literature on the subject. This international handbook offers a timely evaluation of the state of the art of tourism higher education. The book brings together expert contributors from around the world to present current thinking and practice about what is now a major element of education provision world-wide. It is structured round four key themes: - Curriculum - International perspective - Teaching, learning and assessment - Resources, progression and quality. Its global survey of tourism education offers a comprehensive basis for comparative review. In addition to setting out the development and current provision of tourism education it also addresses cutting edge issues such as PhD education, non-formal education, cultural issues in learning, research and teaching, e-learning and e-assessment. It offers practical advice for the design, delivery, evaluation and resourcing of courses and concludes with a reflective agenda of issues for the future.

Key National Education Indicators
National Research Council 2012-08-10

The education system in the United States is continually challenged to adapt and improve, in part because its mission has become far more ambitious than it once was. At the turn
of the 20th century, less than one-tenth of students enrolled were expected to graduate from high school. Today, most people expect schools to prepare all students to succeed in postsecondary education and to prosper in a complex, fast-changing global economy. Goals have broadened to include not only rigorous benchmarks in core academic subjects, but also technological literacy and the subtler capacities known as 21st-century skills. To identify the most important measures for education and other issues and provide quality data on them to the American people, Congress authorized the creation of a Key National Indicators System (KNIS). This system will be a single Web-based information source designed to help policy makers and the public better assess the position and progress of the nation across a wide range of areas. Identifying the right set of indicators for each area is not a small challenge. To serve their purpose of providing objective information that can encourage improvement and innovation, the indicators need to be valid and reliable but they also need to capture the report committee's aspirations for education. This report describes a workshop, planned under the aegis of the Board on Testing and Assessment and the Committee on National Statistics of the National Research Council. Key National Education Indicators is a summary of the meeting of a group with extensive experience in research, public policy, and practice. The goal
of the workshop was not to make a final selection of indicators, but to take an important first step by clearly identifying the parameters of the challenge.

Reviews of National Policies for Education Quality and Equity of Schooling in the German-speaking Community of Belgium OECD 2022-03-15

The German-speaking Community of Belgium is in the process of developing an overall vision for its education system (the “Gesamtvision Bildung”) to guide reforms across the education sector for greater quality and equity. To support this process, the OECD review offers an independent analysis of the German-speaking Community’s school system and assesses the system’s strengths and challenges from an international perspective.

This report develops comparative knowledge on lower secondary education across OECD countries and tailors it to the context of an OECD country: Norway.

This comprehensive review of education policies in Turkey covers primary, secondary, and vocational education and related issues. It finds that an improving economy and governmental continuity provide an unprecedented opportunity for reform.

Education as a Lifelong Process Hans-Peter Blossfeld 2019-02-18 In modernen Wissensgesellschaften ist Bildung die zentrale Voraussetzung sowohl für die demokratische
Teilhabe als auch für wirtschaftliches Wachstum und Wohlstand. Eine sich zunehmend rascher wandelnde, globalisierte Welt erfordert die Bewältigung neuer Anforderungen im privaten Leben und in der Berufs- und Arbeitswelt. Um mehr über den Bildungserwerb und seine Folgen für individuelle Lebensverläufe zu erfahren, um zentrale Bildungsprozesse und -verläufe über die gesamte Lebensspanne zu beschreiben und zu analysieren, wird in Deutschland aktuell das Nationale Bildungspanel aufgebaut.

**Internationalization of Teacher Education and the Nation State** Rita Z. Nazeer-Ikeda 2020-10-30

The relationship between teacher education and internationalization is often regarded as one that has just begun, sparked by globalization and its knowledge economy. This book questions such an assumption by arguing that although contemporary demands on teacher education have intensified the need for internationalization, teacher education and internationalization have a deep and complex
relationship, which is context dependent and has developed differently over time. This book urges its readers to question and rethink overly nationalistic approaches to teacher education. It shows how the internationalization of teacher education could be used as a strategic tool to support sustainable educational development and meet labor market demands for twenty-first century competencies. It puts the spotlight on the imperatives for internationalizing teacher education and its present forms, and considers this current phenomenon in the context of Singapore. This nation state has a history of internationalization, albeit with differing rationales, dimensions and strategies. Internationalization has been a key driver of the Singapore education system’s sustained growth, from its humble beginnings to its present state as one of the best performing education systems in the world. This book will be of great interest to policy makers, academics, researchers and graduate students in the fields of international and comparative education, teacher education, and South East Asian studies. 

Libraries for the National Education Goals
Barbara K. Stripling
1992 Focusing on the major educational initiatives of our times--the National Education Goals outlined and endorsed in 1990 by the nation's governors, and President Bush's America 2000 strategy--this report reviews and summarizes information about the role of
libraries in many different educational efforts designed to meet the national goals. It is argued that libraries can and must play a pivotal role in meeting these goals, including efforts to prepare students to cope with learning in an information age (resource-based learning), and to provide a national electronic network for students, teachers, administrators, and community members (the National Education and Research Network). This work provides direct evidence of the relationship between existing and developing library programs and the national education initiatives, citing specific examples whenever possible or appropriate. A separate chapter is devoted to each of the six goals to be reached by the year 2000. Within each chapter, information is presented for each of three spheres of influence defined in "Education Counts: An Indicator System To Monitor the Nation's Educational Health" (U.S. Department of Education, 1991)-- learning and schools, social context, and national values. Within each sphere of influence, examples of ways in which libraries can contribute to meeting the goal are presented together with research findings, comments, and highlights of programs already involved in the types of activities related to a particular example, and sources of the information given are cited. A 15-item selected bibliography of sources on which this work is based concludes the report. (BBM) Top Careers for Art

Learning to Teach in an Era of Privatization
Christopher A. Lubienski

policymakers often demonstrate surprisingly little awareness of how popular reforms impact teaching and teacher education. In this book, well-regarded scholars help readers develop a more robust understanding of the nature of teacher preparation, as well as an in-depth grasp of how popular policies, practices, and ideologies have taken root domestically and internationally. Contributors include Deron Boyles, Anthony Cody, Kerry Kretchmar, Carmen Montecinos, Beth Sondel, and Christopher Tienken. “This book will help readers consider the possibilities of democratic visions in the teaching profession and in public education, particularly in this time of intense political polarization when critical citizen engagement with our public institutions and policies is deeply needed.” —Janelle Scott, University of California, Berkeley
